How to Reach Us

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are available in print or electronic format. Maps and other geographic reference materials are available for some types of data. In some cases, workshops and seminars have been developed to provide additional information on some subjects.

How to Obtain More Information

Inquiries about products and services should be directed to your local Statistics Canada Reference Centre:

St. John's	(709) 772-4073	Winnipeg	(204) 983-4020
Halifax	(902) 426-5331	Regina	(306) 780-5405
Montréal	(514) 283-5725	Edmonton	(403) 495-3027
Ottawa	(613) 951-8116	Calgary	(403) 292-6717
Toronto	(416) 973-6586	Vancouver	(604) 666-3691

For users who reside outside the local dialing area of the Regional Reference Centres, a toll-free number is provided:

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations normalisées et spéciales sont disponibles sur support papier ou électronique. Des cartes et d'autres documents géographiques de référence sont disponibles pour certains genres de données. Dans certains cas, des ateliers et des séminaires procurent des renseignements complémentaires sur certains sujets.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet des produits et services doivent être adressées au centre de consultation de Statistique Canada de votre région :

St. John's	(709) 772-4073	Winnipeg	(204) 983-4020

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the population of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Preface

This publication is part of The Nation series, a collection of 24 reports containing basic information on a broad range of questions from the 1991 Census of population.

The first four publications in the series present data which were collected from every household in Canada. These data concern demographic, family, household, dwelling, and mother tongue characteristics. The remaining 20 publications contain data collected from a 20% sample of households, and include statistics on demographic, social, cultural and economic characteristics. The geographic coverage in these publications is primarily at the national, provincial and territorial levels, although some data are provided for large metropolitan areas.

Additional statistics on the subjects covered in these publications will be available in other data products, such as the Profiles series, the Dimensions series, Aboriginal Peoples products, Basic Summary Tabulations and Public Use Microdata Files. Together, the products and services from the 1991 Census provide a complete set of current information about Canada and Canadians.

I would like to express my appreciation to the millions of Canadians who completed their questionnaires on June 4, 1991, as well as to all those who assisted Statistics Canada in planning and conducting the census.

Ivan P. Fellegi Chief Statistician of Canada

Préface

La présente publication fait partie de la série «Le pays» qui comprend 24 bulletins dans lesquels se retrouvent des renseignements de base sur un large éventail de questions posées au recensement de la population de 1991.

Les quatre premières publications de la série présentent les données qui ont été recueillies auprès de tous les ménages du Canada. Ces données portent sur des caractéristiques relatives à la démographie, à la famille, au ménage, au logement et à la langue maternelle. Les 20 autres publications contiennent des données recueillies auprès d'un échantillon formé de 20 % des ménages et renferment des statistiques sur des caractéristiques démographiques. sociales, culturelles et économiques. Ces publications présentent surtout des données à l'échelle du Canada, des provinces et des territoires, mais on y trouve également certaines données pour les grandes régions métropolitaines.

Des statistiques supplémentaires sur les sujets traités dans ces publications seront disponibles dans d'autres produits de données tels que les séries «Profils» et «Dimensions», les produits sur les autochtones, les tableaux sommaires de base et les fichiers de microdonnées à grande diffusion. Ensemble. les produits et services du recensement de 1991 procurent des informations récentes et complètes sur le Canada et sa population.

J'aimerais exprimer ma reconnaissance aux millions de Canadiens et Canadiennes qui ont rempli leurs questionnaires le 4 juin 1991 et à tous ceux et celles qui nous ont prêté leur concours en travaillant à la planification et à la réalisation du recensement.

Le statisticien en chef du Canada Ivan P. Fellegi

Highlights

- The Labour Force: in 1991, more than 7 of every 10 men and almost 6 of every 10 women participated in the labour force...
- In 1991, labour force participation rates for men peaked in the 30-34 and 35-39 age groups, with 95% of men in these groups in the labour force. By contrast, female labour force participation peaked in the 20-24 age group at 81%, followed by the 40-44 age group at 80%. For both men and women, participation rates declined starting at age 45.
- Provincially, participation rates in 1991 were highest in the Yukon (82%), Alberta (74%), the Northwest Territories (73%) and Ontario (70%). Rates were lowest in Newfoundland (61%), New Brunswick (63%), and Nova Scotia (63%).
- Unemployment rates at the end of May 1991 were highest in the 20-24 age group for men (17.0%) and in the 15-19 age group for women (15.1%). Except for persons aged 65 years and over, for whom both unemployment and labour force participation rates were low, unemployment rates were lowest for men or women between the ages of 40 and 54 years, ranging from 7.1 to 8.0 %.
- At the provincial level, unemployment rates at the time of the Census were highest in Newfoundland (27.8%), New Brunswick (15.4%), and Prince Edward Island (13.5%) and lowest in Saskatchewan (7.1%), Alberta (7.8%) and in Manitoba (8.1%).
- Older workers in the labour force (those aged 55 and over) in 1991 tended to be men. Of all persons 55 years and over in the labour force in 1991, 63% were men and 37% were women. In 1991, 12% of all men in the labour force were over 55 years of age compared to only 9% for women. In 1971, the comparable figures were 15% and 12% respectively.
- Work activity (weeks worked in 1990, either full-time or part-time) also differs by sex and age ...
- Of those who worked in 1990, men worked more weeks, on average (43 weeks), than women (41 weeks). Among men who worked in 1990, 62% reported that they worked the full year (49-52 weeks), either full-time or part-time, compared to 56% of women who reported full-year work.

Faits saillants

- La population active : en 1991, plus de 7 hommes sur 10 et près de 6 femmes sur 10 faisaient partie de la population active.
- En 1991, les taux d'activité des hommes étaient les plus élevés chez les 30 à 34 ans et chez les 35 à 39 ans : 95 % des hommes de ces groupes d'âge faisaient partie de la population active. Cependant, les taux d'activité des femmes étaient les plus élevés parmi les groupes des 20 à 24 ans (81 %) et des 40 à 44 ans (80 %). Chez les hommes comme chez les femmes, les taux d'activité diminuaient à partir de 45 ans.
- Parmi les provinces et les territoires, les taux d'activité en 1991 étaient les plus élevés au Yukon (82 %), en Alberta (74 %), dans les Territoires du Nord-Ouest (73 %) et en Ontario (70 %). Les taux étaient les plus faibles à Terre-Neuve (61 %), au Nouveau-Brunswick (63 %) et en Nouvelle- Écosse (63 %).
- À la fin mai 1991, les taux de chômage étaient les plus élevés parmi les 20 à 24 ans (17,0 %) chez les hommes et, chez les femmes, parmi les 15 à 19 ans (15,1 %). À part les gens de 65 ans et plus dont les taux d'activité et de chômage étaient faibles, le taux de chômage était le plus faible chez les hommes comme chez les femmes âgé(e)s de 40 à 54 ans; il variait de 7,1 % à 8,0 %.
- À l'échelle des provinces, les taux de chômage au moment du recensement étaient les plus élevés à Terre-Neuve (27,8 %), au Nouveau-Brunswick (15,4 %) et à l'Île-du-Prince-Édouard (13,5 %) et les plus faibles en Saskatchewan (7,1 %), en Alberta (7,8 %) et au Manitoba (8,1 %).
- Les travailleurs plus âgés (55 ans et plus) faisant partie de la population active en 1991 étaient en majorité des hommes. Parmi toutes les personnes de 55 ans et plus au sein de la population active en 1991, 63 % étaient des hommes et 37 % étaient des femmes. En 1991, 12 % de tous les hommes faisant partie de la population active avaient plus de 55 ans, comparativement à seulement 9 % des femmes. En 1971, les données comparatives étaient 15 % et 12 % respectivement.
- Les semaines travaillées en 1991, soit à plein temps, soit à temps partiel diffèrent aussi selon le sexe et l'âge.
- Parmi les personnes ayant travaillé en 1990, les hommes avaient travaillé, en moyenne, durant un plus grand nombre de semaines (43 semaines) que les femmes (41 semaines). Chez les hommes ayant travaillé en 1990, 62 % ont indiqué avoir travaillé pendant toute l'année (49 à 52 semaines), soit à plein temps, soit à temps partiel, comparativement à 56 % des femmes ayant déclaré avoir travaillé pendant toute l'année.

- Women were much more likely to have worked part-time than men. Almost 30% of all women who worked in 1990 worked mostly part-time, compared to only 12% of all men.
- Average weeks worked in 1990 peaked in the 45-54 age group at 46 weeks. Average weeks worked for men aged 45-54 years (47 weeks) were higher than for women (44 weeks).
- The trend of increased participation in the labour force by women continues...
- The labour force participation rate for women in 1991 increased to 60% from 55% in 1986, continuing the fundamental trend which has existed in the labour market in Canada over several decades. In 1971, the participation rate for females was 40%.
- While the participation rate for women rose from 40% to 60%, the participation rate for men remained relatively stable, fluctuating between 76% and 78% in each of the Census years since 1971.
- Although there has been a steady increase in the labour force participation of women, resulting in a narrowing in the gap between the participation rates of men and women, men continued to outnumber women in the labour force in 1991. Nonetheless, women accounted for 45% of the labour force in 1991, up from 35% in 1971.

- Les femmes étaient beaucoup plus susceptibles que les hommes d'avoir travaillé principalement à temps partiel.
 Près de 30 % de toutes les femmes ayant travaillé en 1990 avaient travaillé principalement à temps partiel, comparativement à seulement 12 % de tous les hommes.
- Le nombre moyen de semaines de travail en 1990 était le plus élevé parmi les 45 à 54 ans (46 semaines). Le nombre moyen de semaines de travail chez les hommes âgés de 45 à 54 ans (47 semaines) était plus élevé que celui des femmes (44 semaines).
- Plus forte participation des femmes au sein de la population active : la tendance se poursuit.
- Le taux d'activité des femmes en 1991 était passé à 60 %, en hausse par rapport à 55 % en 1986, poursuivant ainsi la tendance observée sur le marché du travail au Canada au cours de plusieurs décennies. En 1971, le taux d'activité des femmes était de 40 %.
- Alors que le taux d'activité des femmes s'est accru de 40 % à 60 %, le taux d'activité des hommes est demeuré relativement stable, variant de 76 % à 78 %, à chacune des années de recensement depuis 1971.
- En dépit d'une hausse constante de l'activité des femmes, qui a réduit l'écart entre les taux d'activité des hommes et des femmes, les hommes étaient encore plus nombreux que les femmes dans la population active en 1991. Néanmoins, les femmes représentaient 45 % de la population active en 1991, en hausse par rapport à 35 % en 1971.

Introduction

This publication presents statistics from the 1991 Census on labour force activity and work activity in 1990 (number of weeks worked in 1990 and whether these weeks worked were full-time or part-time). The data were collected from a 20% sample of all households. Data are presented for Canada, provinces and territories.

Organization of the Publication

This publication contains three tables. Two tables contain labour force activity data cross-classified by age and sex, one showing marital status, while the other shows historical data from five census years (1971-1991). The other table in this publication presents data on work activity in 1990 cross-classified by age and sex.

Table Descriptions

Below is a brief description of the tables presented in this publication. Detailed definitions of the variables used in these tables are provided in the 1991 Census Dictionary. An abbreviated version of this information is provided in the "Definitions" section at the end of this publication. All of the tables contain information for the population 15 years of age and over (excluding institutional residents).

Table 1 presents labour force activity data for the population 15 years of age and over by five-year age groups, marital status and sex. All data in this table are from the 1991 Census and, therefore, are based on current 1991 labour force concepts. Participation rates, unemployment rates and employment-population ratios are provided.

Table 2 shows work activity in 1990 data (number of weeks worked, full time and part time), for the population 15 years of age and over, cross-classified by selected age groups and sex. Average weeks worked in 1990 statistics are also provided in this table.

Table 3 provides historically comparable information from the 1971, 1976, 1981, 1986 and 1991 Censuses. Age group, labour force activity and sex variables are cross-classified.

Introduction

La présente publication renferme des statistiques tirées du recensement de 1991 sur l'activité et le travail en 1990 (nombre de semaines travaillées en 1990 et si ces semaines étaient travaillées à plein temps ou à temps partiel). Les données ont été recueillies auprès d'un échantillon de 20 % de tous les ménages. Ces données sont présentées pour le Canada, les provinces et les territoires.

Structure de la publication

La présente publication contient trois tableaux. Deux tableaux renferment des données sur l'activité, recoupées selon l'âge et le sexe, un de ces tableaux contenant des données sur l'état matrimonial et un autre contenant des données historiques de cinq années de recensement (1971-1991). Le deuxième tableau de cette publication présente des données sur le travail en 1990, recoupées selon l'âge et le sexe.

Description des tableaux

Vous trouverez ci-dessous une brève description des tableaux contenus dans la présente publication. Les définitions détaillées des variables utilisées dans ces tableaux sont offertes dans le Dictionnaire du recensement de 1991. Une version abrégée de ces informations est donnée dans la section «Définitions» à la fin du présent ouvrage. L'information contenue dans tous les tableaux se rapporte à la population de 15 ans et plus (à l'exclusion des pensionnaires d'un établissement institutionnel).

Le tableau 1 présente des données sur l'activité pour la population de 15 ans et plus selon les groupes d'âge quinquennaux, l'état matrimonial et le sexe. Toutes les données de ce tableau proviennent du recensement de 1991 et sont basées sur les concepts actuels d'activité de 1991. Les taux d'activité, les taux de chômage ainsi que les rapports emploi-population sont également fournis.

Le tableau 2 présente des données sur le travail en 1990 (nombre de semaines travaillées, à plein temps et à temps partiel), pour la population de 15 ans et plus, recoupées selon certains groupes d'âge et le sexe. Les statistiques sur la moyenne de semaines travaillées en 1990 sont aussi fournies dans ce tableau.

Le **tableau 3** présente de l'information historique comparable pour les recensements de 1971, 1976, 1981, 1986 et 1991. Les variables ayant trait aux groupes d'âge, à l'activité et au sexe y sont recoupées.

To enable users to make historical comparisons, the labour force activity data in Table 3 are based on 1971 Census concepts (please see the "Content Considerations" section below for more information). As a result, users should note that the data from the other census years have been adjusted to reflect the 1971 Census labour force definitions and that the 1991 Census labour force activity counts shown in Table 3 differ from those presented elsewhere in this publication.

Content Considerations

Counts of the population, households, dwellings or families shown in tabulations based on a 20% sample may differ from those collected on a 100% basis for the following reasons:

- (1) The exclusion of institutional residents: Institutional residents are defined as those individuals other than staff members and their families who live in institutional collective dwellings such as residences for senior citizens, hospitals, correctional and penal institutions. Detailed sample data were not collected from this sector of the population.
- (2) Weighting: Data collected on a sample basis were weighted up to provide estimates of the entire population excluding institutional residents. However, weighted counts are subject to sampling variability. This means, for any given area, the weighted count may differ from that shown in tabulations containing data collected on a 100% basis. While the differences are relatively small for geographic areas with large populations, they can be greater for areas with small populations. For further information on this topic, please contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6940.

Users should also be aware that differences in counts may be due to the different subpopulations or universes for which the data are reported. For example, mobility data are reported for persons 5 years and over for the 5 year interval data and 1 year and over for the 1 year interval data, excluding those temporarily residing overseas; education and labour force

Afin de rendre possible les comparaisons historiques, les données sur l'activité du tableau 3 sont basées sur les concepts du recensement de 1971 (pour de plus amples renseignements, veuillez vous référer à la section «Considérations relatives au contenu» ci-dessous). Par conséquent, les utilisateurs devraient noter que les données des autres recensements ont été ajustées pour être conformes aux définitions sur l'activité du recensement de 1971 et que les données de l'activité du recensement de 1991 contenues dans le tableau 3 diffèrent de celles présentées dans les autres tableaux de cette publication.

Considérations relatives au contenu

Les chiffres de la population, des ménages, des logements ou des familles dans les totalisations utilisant les données-échantillon (20 %) peuvent différer des données intégrales pour les raisons suivantes :

- (1) L'exclusion des pensionnaires d'un établissement institutionnel: Ces derniers sont définis comme les personnes autres que les membres du personnel et leur famille qui vivent dans des logements collectifs institutionnels tels que les foyers pour personnes âgées, les hôpitaux, les établissements de correction et établissements pénitentiaires. On n'a pas recueilli de données-échantillon détaillées pour ce secteur de la population.
- (2) Pondération: Les données-échantillon sont pondérées afin d'obtenir des estimations de la population tout entière à l'exclusion des pensionnaires d'un établissement institutionnel. Cependant, les chiffres pondérés se caractérisent par la variabilité d'échantillonnage, ce qui signifie que pour toute région donnée, le chiffre pondéré peut différer de celui qui figure dans les totalisations contenant les données intégrales. Bien que les différences soient relativement faibles pour les régions géographiques ayant de fortes populations, elles peuvent être plus importantes dans le cas des régions avec de petites populations. Pour de plus amples renseignements sur ce sujet, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada K1A 0T6 (613)951-6940.

Les utilisateurs doivent également noter que les différences de chiffres peuvent s'expliquer par les différentes sous-populations ou univers pour lesquels les données sont publiées. Ainsi, les données sur la mobilité (période de cinq ans) sont déclarées pour les personnes âgées de cinq ans et plus et les données sur la mobilité (période de un an) sont

data are reported for persons 15 years and over. Furthermore, data may be produced for subsets of these education and labour universes such as total labour force, employed labour force, etc. Similar differences may occur in tabulations for households, dwellings or families. The 1991 Census Dictionary (Catalogue No. 92-301E) provides more detailed information on universes or subpopulations by variable.

Some Indian reserves and Indian settlements were incompletely enumerated during the 1986 and/or 1991 Censuses (see "Special Notes"). These reserves and settlements are identified in Appendix 1.

Comparison of the 1991 Census data with data from earlier censuses is affected by a change in the definition of the 1991 Census population. Persons in Canada on student authorizations, employment authorizations, Minister's permits, and as refugee claimants were enumerated in the 1991 Census but not in previous censuses. These persons are referred to as non-permanent residents. For further information, see the "Special Notes" section.

Comparability of Labour Force Activity Data With Those of Previous Censuses: Differences between the 1991 Census definitions and those of 1971, 1976, 1981 and 1986 for the "Employed", Unemployed" and "Not in the labour force" must be taken into consideration when making comparisons with data published in other census years. (Table 3 in this publication, which contains labour force activity data for a series of census years, is based on 1971 Census concepts, however, and does present data which are historically comparable.)

In 1971 (and in 1976) institutional residents were asked the labour force questions and were classified as "Not in the Labour Force". Since 1981, institutional residents have not been asked the labour force questions and have been excluded from the population 15 years and over. Female farm labourers who were unpaid family workers and who "helped without pay" for less than 20 hours a week were also classified as "Not in the Labour Force" in 1971. Since 1976, these persons have been classified as "Employed". In 1971, persons who were both "Looking for work" and "Absent" were considered as "Unemployed" rather than "Employed".

déclarées pour les personnes âgées de un an et plus, excluant celles qui résident temporairement outre-mer; les données sur la scolarité et la population active ne sont déclarées que pour les personnes âgées de 15 ans et plus. De plus, des données peuvent être produites pour les sous-ensembles de ces univers de la scolarité et du travail tels que la population active totale, la population active occupée, etc. Des différences similaires peuvent se glisser dans les totalisations pour les ménages, les logements ou les familles. Le **Dictionnaire du recensement de 1991** (nº 92-301F au catalogue) contient plus de renseignements détaillés sur les univers ou les sous-populations par variable.

Certaines réserves indiennes et établissements indiens n'ont été que partiellement dénombrés lors des recensements de 1986 et/ou de 1991 (voir «Notes spéciales»). Ces réserves et ces établissements sont indiqués à l'annexe 1.

La comparaison des données du recensement de 1991 avec celles des recensements précédents est affectée par la modification apportée à la définition de la population du recensement de 1991. Les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié ont été dénombrés au recensement de 1991, mais ne l'ont pas été aux recensements antérieurs. Ces personnes sont des résidents non permanents. Pour plus de renseignements, voir la section «Notes spéciales».

Comparabilité des données sur l'activité avec celles des recensements antérieurs: Les différences existantes entre les définitions du recensement de 1991 et celles des recensements de 1971, 1976, 1981 et 1986 pour les catégories «personnes occupées», «chômeurs» et «inactifs» devraient être prises en considération lorsque comparées aux données provenant d'autres recensements. (Toutefois, le tableau 3 de cette publication, qui est basé sur les concepts du recensement de 1971, contient des données sur l'activité historiquement comparables et s'échelonnant sur plus d'une année de recensement.)

En 1971 (et en 1976), les pensionnaires d'un établissement institutionnel ont répondu aux questions sur l'activité et ont été classés parmi les «inactifs». Depuis 1981, les pensionnaires d'un établissement institutionnel ne répondent plus aux questions sur l'activité et sont exclus de la catégorie «population de 15 ans et plus». Les travailleuses agricoles qui faisaient partie des travailleurs familiaux non rémunérés et qui «aidaient sans être rémunérées» moins de 20 heures par semaine étaient aussi classées dans le groupe des «inactifs» en 1971. Depuis 1976, ces mêmes personnes sont maintenant classées dans le groupe des «personnes occupées». En 1971, les personnes qui «cherchaient du travail» et qui étaient «absentes» étaient considérées comme des «chômeurs» plutôt qu'«occupées».

In 1976, two new questions were added in order to determine unemployment status. The first was a question on definite arrangements to report to a new job at a future date (reworded since 1981 to specify that the job was to start in four weeks or less). The second was a question on availability for work. Since 1981, more detailed response categories have been included in the availability for work question. In addition, the reference period for the lay-off question (or for persons who were on lay-off in the reference week), which was 30 days in 1971 and 1976, was changed to 26 weeks in 1981 and then deleted in both 1986 and 1991. The reference period for the "Looking for work" question also changed from "Last week" in 1971 and 1976 to "During the last four weeks" in 1981 and 1986.

In 1976, 1981 and 1991, a school attendance question was available to edit the labour force activity variable or assist in the classification of persons as either "Unemployed" or "Not in the labour force". The 1986 Census, however, did not contain a school attendance question. As a result, compared to 1986, 1991 Census labour force counts are affected slightly by this processing change. This issue is discussed more fully in the "Special Notes" section at the end of this publication (under "Labour Force Activity").

The labour force questions in the 1991 Census were the same as those used in the 1986 Census.

Comparability of Labour Force Activity Data With Those of the Labour Force Survey (LFS): While the 1991 Census definitions were designed to be as consistent as possible with the Labour Force Survey definitions, the two vehicles differ with respect to the number and wording of the questions used to obtain this information.

The census and LFS also differ with respect to coverage, methodology and reference period. The census data cover all persons 15 years and over excluding institutional residents, whereas the LFS data also exclude residents of the Yukon and the Northwest Territories, persons living on Indian reserves, non-permanent residents, as well as members of the Armed Forces and persons in households living abroad. Census questionnaires were completed by the respondents whereas the LFS questionnaires were completed by interviewers. The census was taken on June 4, 1991, and most of the labour force activity data covered the previous week. The monthly LFS data which most closely approximate

En 1976, deux nouvelles questions ont été ajoutées afin de déterminer le statut de chômeur. La première question portait sur les arrangements précis pour commencer un nouvel emploi à une date ultérieure (en 1981, cette question a été reformulée afin de préciser que cet emploi devait débuter dans quatre semaines ou moins). À la deuxième question, le recensé devait indiquer s'il était en mesure de commencer à travailler. Depuis 1981, on a inclus des catégories de réponse plus détaillées pour la question demandant aux recensés s'ils étaient en mesure de commencer à travailler. En outre, la période de référence pour la question sur les mises à pied (ou pour les personnes mises à pied durant la semaine de référence), qui était de 30 jours en 1971 et 1976, a été changée à 26 semaines en 1981 et par la suite, a été supprimée en 1986 et 1991. Pour la question sur la «recherche d'un emploi», la période de référence, qui correspondait à «la semaine dernière» en 1971 et 1976, est devenue «au cours des quatre dernières semaines» en 1981 et 1986.

En 1976, 1981 et 1991, la question sur la fréquentation scolaire a permis de contrôler la variable ayant trait à l'activité ou de classer les personnes dans le groupe des «chômeurs» ou des «inactifs». Par contre, le recensement de 1986 ne contenait pas de question sur la fréquentation scolaire. Alors, vu ce changement, les chiffres sur la population active diffèrent quelque peu quand on compare 1986 et 1991. Cette question est traitée plus en détail à la section «Notes spéciales», à la fin de la présente publication (sous «Activité»).

Les questions du recensement de 1991 sur la population active étaient les mêmes qu'en 1986.

Comparabilité des données sur l'activité avec celles de l'Enquête sur la population active (EPA): Quoique les définitions du recensement de 1991 aient été créées pour correspondre le plus possible aux définitions de l'Enquête sur la population active, les deux concepts diffèrent quant au nombre et au libellé des questions utilisées pour obtenir l'information.

Le recensement et l'EPA diffèrent aussi au niveau de la couverture, de la méthodologie et de la période de référence. Dans le cadre du recensement, les données couvrent toutes les personnes de 15 ans et plus, à l'exception des pensionnaires d'un établissement institutionnel alors que l'EPA exclut également les habitants du Yukon et des Territoires du Nord-Ouest, les personnes demeurant dans les réserves indiennes ainsi que les résidents non permanents. Sont également exclus les membres des Forces armées ainsi que les personnes dans les ménages vivant à l'étranger. Les questionnaires du recensement ont été remplis par les répondants alors que ceux de l'EPA ont été remplis par des

the census data are those which were collected in May or June 1991. The data relate to the reference weeks ending May 18 and June 15 respectively.

For further information on data comparability, please refer to "Labour Force Activity" in the "Special Notes" section of this publication, and Appendix B, "Comparability of Labour Force Activity Data With Those of Previous Censuses and With the Labour Force Survey" in the 1991 Census Dictionary (Catalogue No. 92-301E).

Additional information on content considerations, definitions of terms, explanations of data quality, etc., may also be found at the end of this publication, immediately following the data tables. (This information is presented separately in English and in French sections for easier use.)

Symbols

The following standard symbols may be found in Census products.

- Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.
- -- Amount too small to be expressed.

XXX Figures suppressed to protect confidentiality.

- ** The median could not be calculated as it occurred in an open-ended class.
- * Land area is included in neighbouring census subdivision.
- An error exists in the 1991 counts for this census subdivision (CSD). For further information, see the "Special Notes" section.
- A Adjusted figure due to boundary change.

intervieweurs. Le recensement a eu lieu le 4 juin 1991 et la plupart des données sur l'activité couvraient la semaine précédente. Les données mensuelles de l'EPA qui se rapprochent le plus de celles du recensement sont celles recueillies en mai ou juin 1991. Ces données se rapportent aux semaines de référence se terminant les 18 mai et 15 juin respectivement.

Pour de plus amples renseignements sur la comparabilité des données, reportez-vous à la rubrique «Activité» de la section «Notes spéciales» de la présente publication et à l'annexe H, «Comparabilité des données sur l'activité avec celles des recensements antérieurs et de l'Enquête sur la population active», dans le **Dictionnaire du recensement de 1991** (n° 92-301F au catalogue).

Vous trouverez également à la fin de la présente publication, immédiatement après les tableaux de données, d'autres informations sur les considérations relatives au contenu, à la définition de termes, à la qualité des données, etc. (Ces informations sont présentées séparément en français et en anglais pour en faciliter l'usage.)

Signes conventionnels

Les signes conventionnels suivants peuvent être retrouvés dans les produits du recensement.

- .. Nombres non disponibles.
- ... N'ayant pas lieu de figurer.
- Néant ou zéro.
- -- Nombres infimes.

XXX Nombres supprimés afin de protéger la confidentialité.

- ** Il est impossible de calculer la médiane car elle se trouve dans une des classes ouvertes de répartition utilisée pour calculer la médiane.
- * La superficie est comprise dans la subdivision de recensement avoisinante.
- Une erreur a été relevée dans les chiffres de 1991 pour cette subdivision de recensement (SDR). Pour plus de renseignements, voir la section «Notes spéciales».
- A Chiffre ajusté à cause de changement de limite.

- † Excludes Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the "Special Notes" section.
- ¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the "Special Notes" section.
- † Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir la section «Notes spéciales».
- ¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir la section «Notes spéciales».

Definitions

The definitions of geographic terms and census concepts are presented here in summary form only. Users should refer to the 1991 Census Dictionary (Catalogue No. 92-301E) for the full definitions and additional remarks related to these concepts and definitions.

Age

Refers to the age at last birthday (as of the census reference date, June 4, 1991). This variable is derived from the date of birth question which asks day, month and year of birth. Persons who were unable to give the exact date of birth were asked to give the best possible estimate.

Employed

Refers to persons who, during the week prior to June 4, 1991:

- (a) did any work at all excluding housework or other maintenance or repairs around the home and volunteer work; or
- (b) were absent from their job or business because of own temporary illness or disability, vacation, labour dispute at their place of work, or were absent for other reasons.

Data are available for persons 15 years of age and over, excluding institutional residents.

Employment/Population Ratio

Refers to the number of persons employed expressed as a percentage of the population 15 years of age and over, excluding institutional residents. The employment/population ratio for a particular group (age, sex, marital status, geographic area, etc.) is the number employed in that group expressed as a percentage of the population for that group.

Full-time or Part-time Weeks Worked in 1990

Refers to persons who worked in 1990. These persons were asked to report whether the weeks they worked in 1990 were full weeks (30 hours or more per week) of work or not. Persons with a part-time job for part of the year and a full-time job for another part of the year were to report the information for the job at which they worked the most weeks. Data are available for persons 15 years of age and over who worked in 1990, excluding institutional residents.

Indian Reserve

Refers to land, the legal title to which is vested in Her Majesty, that has been set apart for the use and benefit of an Indian band and that is subject to the terms of the Indian Act. Since it is generally excluded from local jurisdiction and is administered by the Federal Department of Indian and Northern Affairs Canada (INAC), it is classified as a census subdivision (CSD) by Statistics Canada.

Indian Settlement

Refers to places, identified by the Federal Department of Indian and Northern Affairs Canada (INAC) for statistical purposes only, where a self-contained group of at least 10 Indian people reside more or less permanently. Indian settlements are usually located on Crown lands under federal or provincial jurisdiction. They have not been set apart for the use and benefit of an Indian band as is the case with Indian reserves.

Institutional Resident

Refers to a resident of an "institutional" collective dwelling, other than staff members and their families.

Labour Force Activity

Refers to the labour market activity of the working age population who, in the week prior to June 4, 1991, were employed or unemployed. The remainder of the working age population is classified as not in labour force. Data are available for persons 15 years of age and over, excluding institutional residents.

Appendix 3 shows all components of Labour Force Activity.

Labour Force Activity (Based on 1971 Labour Force Concepts)

Refers to the labour market activity of the working age population in the reference week (the week prior to Census Day) according to 1971 Census concepts. Although different (and fewer) questions were asked in the 1971 Census, census labour force activity concepts have remained fairly consistent since 1971. For further information, please refer to the 1991 Census Dictionary (Catalogue No. 92-301E), Appendix B.

Marital Status (Historical)

Refers to the conjugal status of a person.

This variable groups persons living common-law with the "Now married (excluding separated)" category. (Historically comparable to 1986 and 1981.)

The various categories are defined as follows:

Now married (excluding separated)

Persons whose husband or wife is living, unless the couple is separated or a divorce has been obtained. Persons living common-law are grouped with the "Now married" category.

Separated

Persons who have been deserted or who have parted because they no longer want to live together, but have not obtained a divorce.

Divorced

Persons who have obtained a legal divorce and who have not remarried.

, Dig

Widowed

Persons who have lost their spouse through death and who have not remarried.

Never married (single)

Persons who have never married (including all persons less than 15 years of age) and persons whose marriage was annulled.

" "Separated" persons were included with "married" persons in 1966 and 1961.

Not in Labour Force

Refers to those persons who, in the week prior to enumeration, were unwilling or unable to offer or supply their labour services under conditions existing in the labour market. It includes persons who looked for work during the last four weeks but who were not available to start work in the reference week, as well as persons who did not work, did not have a new job to start in four weeks or less, were not on temporary lay-off or did not look for work in the four weeks prior to enumeration. Data are available for persons 15 years of age and over, excluding institutional residents.

Participation Rate

Refers to the total labour force (in reference week) expressed as a percentage of the population 15 years of age and over, excluding institutional residents. The participation rate for a particular group (age, sex, marital status, geographic area, etc.) is the labour force in that group expressed as a percentage of the population for that group.

Province

Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified.

Sex

Refers to the gender of the respondent.

Territory

Refers to two major political divisions of Canada, namely Yukon Territory and Northwest Territories. From a statistical point of view, these territories are equivalent to provinces, i.e. a basic unit for which data are tabulated and cross-classified.

Total Labour Force (in Reference Week)

Refers to persons who were either employed or unemployed during the week prior to enumeration (June 4, 1991). Data are available for persons 15 years of age and over, excluding institutional residents.

Unemployed

Refers to persons who, during the week prior to enumeration (June 4, 1991):

- (a) were without work, actively looked for work in the past four weeks and were available for work; or
- (b) were on lay-off and expected to return to their job and were available for work; or
- (c) had definite arrangements to start a new job in four weeks or less and were available for work.

Data are available for persons 15 years of age and over, excluding institutional residents.

Unemployment Rate

Refers to the unemployed labour force expressed as a percentage of the total labour force (in reference week). The unemployment rate for a particular group (age, sex, marital status, geographic area, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group. Data are available for persons 15 years of age and over, excluding institutional residents.

Weeks Worked in 1990

Refers to the number of weeks in 1990 during which a person worked, even if only for a few hours. It includes weeks of paid vacation or sick leave with pay or paid absence on training courses. "Work" excludes housework or other maintenance or repairs around the home and volunteer work. Data are available for persons 15 years of age and over, excluding institutional residents.

Work Activity in 1990

Refers to the number of weeks in which a person worked in 1990 and whether these weeks worked were full-time or part-time. Data are available for persons 15 years of age and over, excluding institutional residents.

Data Quality

General

The 1991 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials, through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates.

Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- coverage errors, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- non-response errors, which result when responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason:
- response errors, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;
- processing errors, which can occur at various steps including: coding, when "write-in" responses are transformed into numerical codes; data capture, when responses are transferred from the census questionnaire to computer tapes by key-entry operators; and imputation when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);
- sampling errors, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

Coverage Errors

Coverage errors affect the accuracy of the census counts, that is the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error resulting from persons or dwellings being missed, incorrectly included in the census or double counted.

Missed dwellings or persons result in undercoverage. Dwellings can be missed because of misunderstanding of enumeration area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed when their dwelling is missed or classified as vacant, or when individual household members are omitted from the questionnaire because the respondent misinterprets the

instructions on whom to include. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in **overcoverage**. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not in the census population universe, such as a foreign resident or a fictitious person, may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

, W.

Ţ.

In 1991, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant was revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census counts for households and persons missed because their dwelling was incorrectly classified as vacant. Second, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place of residence. Based on this sample, estimates were obtained of the number of persons missed because they were temporarily absent from their usual place of residence. Corresponding adjustments were made to the final population counts. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province and territory, the magnitude of this residual undercoverage in the 1991 Census is being measured by means of a special study known as the Reverse Record Check. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. The fourth study, known as Overcoverage Study, is designed to investigate overcoverage errors. The results of the Reverse Record Check and the Overcoverage Study, when taken together, furnish an estimate of net undercoverage.

Other Non-Sampling Errors

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units

Sometimes, it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but information is missing for some questions or individuals. Considerable effort is devoted to ensure as complete a response as possible. Census representatives edit the questionnaires and follow up on missing information. The Census Representative's work is then checked by both a supervisor and a quality control technician. Despite this, at the end of the collection stage, a small number of responses is still missing. Although missing entries

are eliminated during processing by replacing a missing value by the corresponding entry for a "similar" record, there remain some potential **non-response errors**. This is particularly serious if the non-respondents differ in some respects from the respondents, since this procedure will result in **non-response bias**.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. Such errors are referred to as **response errors**. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative when completing certain parts of the questionnaire, such as structural type of dwelling, or when calling back to obtain a missing response.

Some of the questions on the census document require a written response. During processing, these "write-in" entries are given a numeric code. **Coding errors** can occur, especially when the code list is extensive (as with, for example, language, ethnic origin, industry and occupation), and when the written response is ambiguous, incomplete or difficult to read. Coding errors are controlled, though not completely eliminated, by verifying a sample of the codes and taking corrective action where necessary. For the first time in 1991, much of the coding was automated, partly in an effort to reduce the extent of coding errors.

The information on the questionnaires is key-entered onto a computer file. Two procedures are used to control the number of data capture errors. First, certain edits (such as range checks) are performed as the data are keyed. Second, a sample from each batch of documents is re-keyed and compared with the original entries. If there is more than a specified number of errors among the original entries, the whole batch is re-keyed.

Once the data have been captured, they are sent to Ottawa where they undergo a series of computer checks to identify missing or inconsistent responses. In the case of inconsistent responses, it has first to be decided which response is to be considered invalid. Invalid or missing responses must then be replaced by valid responses, that is, responses which are consistent with other data on the record. For a small proportion of cases, the correct response can be inferred from other data on the record. In most cases, however, this is not possible and a valid response is obtained from a "donor" record selected at random from among a group of consistent records which are similar to the invalid record in terms of a number of related characteristics. There is, of course, no guarantee that the imputed value will necessarily be the correct response for the individual concerned. However, provided the missing or invalid records are similar, on average, to the valid records, any imputation errors will more or less cancel out when results are tabulated for a sufficiently large geographic area or population subgroup.

Various studies are being carried out to evaluate the quality of the responses obtained in the 1991 Census. For each question, response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response and other errors. Also, tabulations from the 1991 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour

Force Survey) and from various administrative records (such as birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons, there are some micromatch studies in progress, in which census responses are compared with another source of information at the individual record level. For certain "stable" characteristics (such as age, sex, mother tongue, place of birth), the responses obtained in the 1991 Census, for a sample of individuals, are being compared with those for the same individuals in the 1986 Census. Also, following the 1991 Census, a sample of persons was re-enumerated, primarily to determine overcoverage rates. At the same time, however, interviewers asked a series of detailed questions on language, ethnic origin and marital status; the responses will be compared with the corresponding census responses in order to identify, and hopefully understand, response errors.

Sampling Errors

Estimates obtained by weighting up responses collected on a sample basis are subject to error due to the fact that the distribution of characteristics within the sample will not usually be identical to the distribution of characteristics within the population from which the sample has been selected.

The potential error introduced by sampling will vary according to the relative scarcity of the characteristics in the population. For large cell values, the potential error due to sampling, as a proportion of the cell value, will be relatively small. For small cell values, this potential error, as a proportion of the cell value, will be relatively large.

The potential error due to sampling is usually expressed in terms of the so-called "standard error". This is the square root of the average, taken over all possible samples of the same size and design, of the squared deviation of the sample estimate from the value for the total population.

The table below provides approximate measures of the standard error due to sampling. These measures are intended as a general guide only.

Table: Approximate Standard Error Due to Sampling for 1991 Census Sample Data

Cell Value	Approximate Standard Error
50 or less	15
100	20
200	30
500	45
1,000	65
2,000	90
5,000	140
10,000	200
20,000	280

50,000	450
100,000	630
500,000	1400

Users wishing to determine the approximate error due to sampling for any given cell of data, based upon the 20% sample, should choose the standard error value corresponding to the cell value that is closest to the value of the given cell in the census tabulation. When using the obtained standard error value, in general the user can be reasonably certain that, for the enumerated population, the true value (discounting all forms of error other than sampling) lies within plus or minus three times the standard error (e.g., for a cell value of 1,000, the range would be 1,000 \pm 3 \times 65 or 1,000 \pm 195).

The standard errors given in the table above will not apply to population or universe (persons, households, dwellings or families) totals or subtotals for the geographic area under consideration (see Sampling and Weighting). The effect of sampling for these cells can be determined by comparison with a corresponding 100% publication.

The effect of the particular sample design and weighting procedure used in the 1991 Census will vary, however, from one characteristic to another and from one geographic area to another. The standard error values in the table may, therefore, understate or overstate the error due to sampling.

For further information on the quality of census data, contact the Social Survey Methods Division at Statistics Canada, Ottawa, Canada KIA 0T6 (613) 951-6940.

Confidentiality and Random Rounding

The figures shown in the tables have been subjected to a confidentiality procedure known as "random rounding". This is done to prevent the possibility of associating statistical data with any identifiable individual. Under this method, all figures including totals are randomly rounded either up or down to a multiple of "5", and in some cases "10". While providing strong protection against disclosure, this technique does not add significant error to the census data. However, there are some consequences for the users. Since totals are independently rounded, they do not necessarily equal the sum of individually rounded figures in distributions. Also, minor differences can be expected in corresponding totals and cell values in various census tabulations. Similarly, percentages, which are calculated on rounded figures, do not necessarily add up to 100. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data. It should also be noted that small cell counts may suffer a significant distortion as a result of random rounding. Individual data cells containing small numbers may lose-their precision as a result.

Users should be aware of possible data distortions when they are aggregating these rounded data. Imprecisions as a result of rounding tend to cancel each other out when data cells are reaggregated. However, users can minimize these distortions by using, whenever possible, the appropriate subtotals when aggregating.

For those requiring maximum precision, the option exists to use custom tabulations. With custom products, aggregation is done using individual census database records. Random rounding occurs only after the data cells have been aggregated, thus minimizing any distortion.

In addition to random rounding, **area suppression** has been adopted to further protect the confidentiality of individual responses.

Area suppression results in the deletion of all characteristic data for geographic areas with populations below a specified size. The extent to which data are suppressed depends upon the following factors:

- if the data are tabulated from the 100% database, suppression is based upon the total population;
- if the data are tabulated from the 20% sample database, suppression is based upon the non-institutional population;
- if the data contain an income distribution, those areas with populations below 250 persons are suppressed;
- if the data do not contain an income distribution, those areas with a population of less than 40 persons are suppressed.

In all cases, suppressed data are included in the appropriate higher aggregate subtotals and totals.

This technique is being implemented for all products involving subprovincial data (i.e. Profile series, basic summary tabulations, semi-custom and custom data products) collected on a 100% or 20% sample basis.

Sampling and Weighting

The 1991 Census data were collected either on a 100% basis (i.e. for all households) or on a sample basis (i.e. from only a random sample of households) with data weighted to provide estimates of the entire population. The information in this report was collected on a 20% sample basis and weighted up to compensate for sampling. All table headings are noted accordingly. Note that, on Indian reserves and in remote areas, all data were collected on a 100% basis.

For any given geographic area, the weighted population, household, dwelling or family total or subtotal may differ from that shown in reports containing data collected on a 100% basis. Such variation (in addition to the effect of random rounding) will be due to sampling.

Special Notes

Population Counts Based on Usual Residence

The population counts shown here for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada, as well as those considered "non-permanent residents" (see note on this group). In most

areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in the area at any particular time could significantly exceed the number of usual residents shown here.

Incompletely Enumerated Indian Reserves and Indian Settlements

On some Indian reserves and Indian settlements in the 1991 Census, enumeration was not permitted or was interrupted before it could be completed. Moreover, some Indian reserves and Indian settlements were enumerated late or the quality of the collected data was considered inadequate. These geographic areas (a total of 78) are called incompletely enumerated Indian reserves and Indian settlements.

Data for 1991 are therefore not available for the incompletely enumerated reserves and settlements and are not included in tabulations. Data for geographic areas containing one or more of these reserves and settlements are therefore noted accordingly. Because of the missing data, users are cautioned that for the affected geographic areas, comparisons (e.g., percentage change) between 1986 and 1991 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can be significant for smaller areas, where the affected reserves and settlements account for a higher proportion of the population.

A list of incompletely enumerated Indian reserves and Indian settlements along with Population and Occupied Private Dwelling Counts from the last two censuses (where available) has been compiled and is shown in Appendix 1.

Non-permanent Residents

In 1991, for the first time, the census of population included both permanent and non-permanent residents of Canada. Non-permanent residents are persons who hold student or employment authorizations, Minister's permits or who are refugee claimants.

Prior to 1991, only permanent residents of Canada were included in the census. (The only exception to this was 1941.) Non-permanent residents were considered foreign residents and were not enumerated.

Today in Canada, non-permanent residents make up a growing segment of the population. Their presence can affect the demand for such government services as health care, schooling and employment programs. The inclusion of non-permanent residents in the 1991 Census will also facilitate comparisons with provincial and territorial statistics (marriages, divorces, births and deaths) which include this population. In addition, the census definition is now closer to the United Nations' recommendation that long-term residents (persons living in a country for one year or longer) be enumerated.

Total population counts, as well as counts for all variables, will be affected by this change in the 1991 Census universe. According to the 1991 Census, there were 223,410 non-permanent residents in Canada, representing slightly less than 1% of the

total population. Users should be especially careful when comparing data from 1991 and previous censuses in geographic areas where there is a concentration of non-permanent residents. These include the major metropolitan areas of Ontario, British Columbia and Quebec. The population distribution of non-permanent residents for the provinces, territories and census metropolitan areas is shown in Appendix 2.

Although every attempt was made to enumerate non-permanent residents, the completeness of enumeration of this population was below that achieved for permanent residents. Factors such as language difficulty and a reluctance to complete a government form or understand the need to participate, may have affected the enumeration of non-permanent residents and resulted in undercounting.

Labour Force Activity

The census labour force activity concepts have not changed between 1986 and 1991. However, the processing of the data was modified, causing some differences. In the 1991 Census, a question on school attendance was asked. This question was not asked in 1986. It was used to edit the labour force activity variable, specifically unemployment. Consequently, the processing differences affect the unemployed population and are mostly concentrated among the 15-19 age group. The table below indicates the magnitude of the effect upon the data, at the Canada level.

Labour Force Activity, 1991 Census of Canada

Canada	1991 Census (as published in 1991)	1991 Census (using 1986 processing)
Labour force 15		
years and over	14,474,940	14,535,850
Employed	13,005,505	13,005,500
Unemployed	1,469,440	1,530,350
Not in the labour force	6,829,795	6,768,885
Labour force 15-19		
years	904,370	948,260

Number of Weeks Worked

The data for the 40-48 and 49-52 weeks worked categories for 1990 must be interpreted with caution because some respondents tend to exclude their paid leave of absence due to vacation or for other reasons from their work weeks, when in fact such leave of absence should be included. As a result, the 49-52 week category may be understated.

Appendix 3. Population and Labour Force Activity Components, 1991 Census of Canada

Other Related Products

The 1991 Census product line is designed to serve the diverse needs of our users. A wide range of products and services are available from the 1991 Census of Population. They are organized into five categories:

- (1) Reference Products are designed to make census products and services easier to use by helping clients identify their needs and to find and interpret the data.
- (2) Data Products present a wide range of census data for standard geographical areas, covering social, cultural and economic characteristics of Canadians.
- (3) Analytical Products provide an interpretation of the 1991 Census data covering a variety of topics or themes, and present the findings in easy-to-read publications.
- (4) **Tabulation Services** provide tabulations aimed at meeting users' needs in a more detailed or specific form than is available in standard products.
- (5) Workshops and Seminars are offered to inform new and current data users about census data and to assist them in maximizing the value of census data to meet their needs.

To obtain more detailed information on the products and services available from the census, refer to the **1991 Census Catalogue**, Catalogue No. 92-302E. As well, you may contact your nearest Regional Reference Centre listed in the "Contacts" section of this publication.

Listed below are other products with presentation and content similar to this publication.

Regional Reference Centres

Statistics Canada's Regional Reference Centres provide a full range of census products and services. Each reference centre is equipped with a library and a sales counter where users can consult or purchase publications, microcomputer diskettes, microfiche, maps and more.

The staff of the Regional Reference Centres provides consultative and research services in addition to providing after-sales service and support, including seminars and workshops on the use of Statistics Canada information.

Each centre has facilities to retrieve information from Statistics Canada's computerized data retrieval systems CANSIM and E-STAT. A telephone inquiry service is also available with toll-free numbers for regional users outside local calling areas. Call, write, fax or visit the nearest Regional Reference Centre for more information.

Additional References and Services

In addition to Regional Reference Centres and depository libraries, Statistics Canada publications may be ordered through your local bookstore or subscription agent. Contact the nearest Regional Reference Centre for a list of Canadian outlets available, or consult the 1991 Census Catalogue (Catalogue No. 92-302E).

Secondary distributors offer data access and analytical support through a variety of consulting and computer-based services not available at Statistics Canada. The names and addresses of licensed distributors may be obtained from any Regional Reference Centre.

Statistics Canada provides digital geographic products which allow computer manipulation of geographic data. A customized retrieval service is available for users who wish to define their own geographic area of study. A variety of data retrieval files and services provide flexibility in selecting a geographic base.

A complete description of available digital files and services is documented in the 1991 Census Catalogue (Catalogue No. 92-302E).

Information concerning census of agriculture products and services may be referenced in the 1991 Census of Agriculture Products and Services publication, Catalogue No. 92-303, or by calling toll free 1-800-465-1991.

Users with special data requirements may request post-census survey services. Data are made available on microcomputer diskettes for use with spreadsheet software, or on paper output. For additional information, please contact the nearest Regional Reference Centre.

The Electronic Data Dissemination Division (EDDD) is responsible for CANSIM, Statistics Canada's computerized database network and information retrieval service. Users are provided with access to current and historical statistics in various forms including specialized data manipulation and analysis packages, graphics facilities and a bibliographic search service. For more information about CANSIM, contact any Regional Reference Centre.

Définitions

Seul un résumé des définitions des termes géographiques et des concepts du recensement est présenté ici. Les utilisateurs doivent consulter le **Dictionnaire du recensement de 1991** (n° 92-301F au catalogue) pour les définitions complètes et les observations additionnelles pertinentes.

Activité

Activité sur le marché du travail des personnes en âge de travailler qui, au cours de la semaine ayant précédé le 4 juin 1991, étaient occupées ou chômeuses. Les autres personnes en âge de travailler sont classées dans la catégorie des inactifs. Les données portent sur les personnes âgées de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel.

L'annexe 3 présente toutes les composantes de l'activité.

Activité (selon les concepts relatifs à l'activité au recensement de 1971)

Activité sur le marché du travail des personnes en âge de travailler au cours de la semaine de référence (semaine précédant le jour du recensement) selon les concepts du recensement de 1971. Même si, lors du recensement de 1971, on a posé des questions différentes (et moins nombreuses), les concepts du recensement relatifs à l'activité sont demeurés sensiblement les mêmes depuis 1971. Pour de plus amples renseignements, veuillez consulter l'annexe H du Dictionnaire du recensement de 1991 (n° 92-301F au catalogue).

Âge

Âge au dernier anniversaire de naissance (à la date de référence du recensement, soit le 4 juin 1991). Cette variable est établie d'après la réponse à la question sur la date de naissance qui demande le jour, le mois et l'année de naissance. Les personnes qui ne connaissaient pas la date exacte de leur naissance devaient donner la meilleure estimation possible.

Chômeurs

Personnes qui, pendant la semaine ayant précédé le recensement (4 juin 1991) :

- a) étaient sans travail, mais avaient cherché un emploi au cours des quatre semaines précédentes et étaient prêtes à travailler;
- b) avaient été mises à pied mais prévoyaient reprendre leur emploi ;
- c) avaient pris des dispositions précises en vue de se présenter à un nouvel emploi dans les quatre semaines suivantes.

Les données portent sur les personnes âgées de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel.

Établissement Indien

Lieu, désigné par le ministère des Affaires indiennes et du Nord Canada (AINC) à des fins statistiques seulement, où un groupe indépendant d'au moins 10 autochtones habitent de façon plus ou moins permanente. Les établissements indiens sont généralement situés sur des terres de la Couronne soumises à l'autorité fédérale ou à celle des administrations provinciales. Contrairement aux réserves indiennes, ces terres ne sont pas réservées à l'usage exclusif d'une bande indienne.

État matrimonial (historique)

Situation conjugate d'une personne.

Cette variable regroupe les personnes vivant en union libre dans la catégorie "Actuellement marié(e) (sauf séparé(e))". (Ces données sont comparables à celles des années de recensement de 1986 et 1981.)

Les différentes catégories se définissent comme suit :

Actuellement marié(e) (sauf séparé(e))

Personne dont le conjoint est vivant, à moins que le couple ne soit séparé ou divorcé. Les personnes vivant en union libre font partie de la catégorie "Actuellement marié(e)".

Séparé(e)

Personne qui a été abandonnée par son conjoint ou qui a quitté parce qu'elle ne voulait plus vivre avec cette personne, mais qui n'a pas obtenu de divorce.

Divorcé(e)

Personne qui a obtenu un divorce et qui ne s'est pas remariée.

Veuf(ve)

Personne dont le conjoint est décédé et qui ne s'est pas remariée.

Célibataire (jamais marié(e))

Personne qui n'a jamais été mariée (y compris toute personne de moins de 15 ans) ou personne dont le mariage a été annulé.

Les personnes "séparées" étaient comptées comme personnes "mariées" en 1966 et 1961.

Inactifs

Personnes qui, pendant la semaine ayant précédé le recensement, ne voulaient pas ou ne pouvaient pas travailler compte tenu des conditions existant sur le marché du travail. Les inactifs incluent les personnes qui avaient cherché du travail au cours des quatre semaines précédentes, mais qui n'étaient pas prêtes à travailler pendant la semaine de référence, de même que les personnes qui n'avaient pas travaillé, n'avaient pas d'emploi auquel elles devaient se présenter au cours des quatre semaines suivant la semaine de référence et n'avaient pas été temporairement mises à pied ni n'avaient cherché de travail pendant cette période. Les données portent sur les personnes âgées de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel.

Š

Pensionnaire d'un établissement institutionnel

Résident d'un logement collectif «institutionnel», autre qu'un membre du personnel et sa famille.

Personnes occupées

Personnes qui, au cours de la semaine ayant précédé le 4 juin 1991:

- a) avaient fait un travail quelconque, à l'exclusion des travaux ménagers, des travaux d'entretien ou des réparations dans leur propre logement et du travail bénévole;
- étaient temporairement absentes de leur travail ou de l'entreprise à cause d'un conflit de travail, d'une maladie ou d'une incapacité temporaire, de vacances, ou encore pour d'autres raisons.

Les données portent sur les personnes âgées de 15 ans et plus, à l'exclusion des pensionnaires d'un établissement institutionnel.

Population active totale (pendant la semaine de référence)

Personnes qui étaient, soit occupées, soit en chômage pendant la semaine ayant précédé le recensement (le 4 juin 1991). Les données portent sur les personnes âgées de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel.

Province

Principale division politique du Canada. Du point de vue statistique, il s'agit d'une unité de base selon laquelle les données sont totalisées et recoupées.

Rapport emploi/population

Pourcentage de la population active occupée par rapport à la population de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel. Le rapport emploi/population pour un groupe donné (âge, sexe, état matrimonial, région géographique, etc.) correspond au nombre de personnes occupées dans ce groupe exprimé en pourcentage de la population pour ce groupe.

Réserve Indienne

Territoire dont le titre légal de propriété appartient à Sa Majesté la Reine, qui a été réservé à l'usage et au profit d'une bande indienne et qui est assujetti aux termes de la Loi sur les Indiens. Puisque les réserves indiennes échappent généralement à la compétence des autorités locales et sont administrées par le ministère des Affaires indiennes et du Nord Canada (AINC), elles sont considérées par Statistique Canada comme des subdivisions de recensement (SDR).

Semaines travaillées, à plein temps ou à temps partiel, en 1990

Variable s'appliquant aux personnes qui ont travaillé en 1990. Ces dernières devaient préciser si elles avaient travaillé des semaines complètes (30 heures ou plus par semaine) ou non en 1990. Les personnes qui avaient un emploi à temps partiel pendant une partie de l'année et un emploi à plein temps pendant l'autre partie devaient répondre en fonction de l'emploi pour lequel elles avaient travaillé le plus grand nombre de semaines. Les données portent sur les personnes âgées de 15 ans ou plus qui ont travaillé en 1990, à l'exclusion des pensionnaires d'un établissement institutionnel.

Semaines travaillées en 1990

Nombre de semaines au cours desquelles les personnes ont travaillé, ne serait-ce que quelques heures, en 1990. Sont comprises les semaines de vacances payées, de congé de maladie ou d'absences payées pour suivre des cours de formation. Les travaux ménagers, les autres travaux d'entretien et les réparations effectués à la maison de même que le bénévolat ne sont pas considérés comme du « travail ». Les données portent sur les personnes âgées de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel.

Sexe

Qualité d'homme ou de femme.

Taux d'activité

Pourcentage de la population active totale (pendant la semaine de référence) par rapport à la population âgée de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel. Le taux d'activité d'un groupe donné (âge, sexe, état matrimonial, région géographique, etc.) correspond au nombre d'actifs dans ce groupe exprimé en pourcentage de la population de ce groupe.

Taux de chômage

Pourcentage de la population active en chômage par rapport à la population active totale (pendant la semaine de référence). Le taux de chômage d'un groupe donné (âge, sexe, état matrimonial, région géographique, etc.) correspond au nombre de chômeurs dans ce groupe exprimé en pourcentage de la population active dans ce groupe. Les données portent sur les personnes âgées de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel.

Territoire

Il s'agit de deux grandes divisions politiques du Canada, soit le Territoire du Yukon et les Territoires du Nord-Ouest. Du point de vue statistique, ces territoires sont l'équivalent des provinces, c'est-à-dire une unité de base pour laquelle des données sont totalisées et recoupées.

Travail en 1990

Variable indiquant le nombre de semaines au cours desquelles les personnes ont travaillé en 1990, à plein temps ou à temps partiel. Les données portent sur les personnes âgées de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel.

Qualité des données

Généralités

Le recensement de 1991 a été une entreprise complexe et de grande envergure. Bien que l'on ait déployé des efforts considérables pour assurer le respect des normes élevées tout au cours des opérations de la collecte et du traitement, il est inévitable que les estimations résultantes soient entachées d'erreurs. Il faut que les utilisateurs des données du recensement sachent que ces erreurs existent et qu'ils aient une idée générale de ses principales composantes afin d'être en mesure de déterminer si les données produites peuvent leur être utiles et d'évaluer les risques auxquels ils s'exposent en tirant des conclusions ou en prenant des décisions à partir de ces données.

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, depuis la préparation des documents jusqu'au traitement des données, en passant par l'établissement des listes de logements et la collecte des données. Certaines erreurs, qui surviennent plus ou moins au hasard, ont tendance à s'annuler lorsque les réponses fournies par les divers répondants sont agrégées pour un groupe assez important. Dans le cas des erreurs de cette nature, l'estimation correspondante sera d'autant plus précise que le groupe visé sera grand. C'est pourquoi on conseille aux utilisateurs de faire preuve de prudence lorsqu'ils utilisent des estimations relatives à de petits groupes. Toutefois, certaines erreurs peuvent survenir de façon plus systématique et introduire un «biais» dans les estimations. Comme ce biais persiste quelle que soit la taille du groupe pour lequel les réponses sont agrégées et comme il est particulièrement difficile d'en mesurer l'importance, les erreurs systématiques posent pour la plupart des utilisateurs de données des problèmes plus graves que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreur sont les suivants :

- les erreurs de couverture qui se produisent lorsqu'on oublie des logements et/ou des personnes, qu'on les englobe à tort ou qu'on les compte deux fois;
- les erreurs dues à la non-réponse qui surviennent lorsque l'on n'a pu obtenir de réponses d'un petit nombre de ménages et/ou de personnes en raison d'une absence prolongée ou pour toute autre raison;
- les erreurs de réponse qui surviennent lorsque le répondant, ou parfois le recenseur, a mal interprété une question du recensement et a inscrit une mauvaise réponse;
- les erreurs de traitement qui peuvent se produire à diverses étapes, notamment au codage, lorsque les réponses en lettres sont converties en codes numériques; à la saisie des données, lorsque les préposés à l'entrée des données transfèrent sur bandes pour ordinateur les réponses figurant au questionnaire du recensement; à l'imputation, lorsqu'une réponse «valide», mais pas nécessairement exacte, est insérée dans un enregistrement par l'ordinateur pour remplacer une réponse manquante ou «invalide» («valides» et «invalides» renvoient à la cohérence de la

réponse, compte tenu des autres renseignements compris dans l'enregistrement);

les erreurs d'échantillonnage qui s'appliquent uniquement aux questions supplémentaires figurant dans le questionnaire complet distribué à un échantillon de un cinquième des ménages; elles résultent du fait que les réponses à ces questions, une fois pondérées pour représenter l'ensemble de la population, diffèrent inévitablement des résultats que l'on aurait obtenus si l'on avait posé ces questions à tous les ménages.

áę.

ď.

· .

N.

Æ.

i

Les types d'erreur mentionnés plus haut ont tous une composante aléatoire et une composante systématique. Toutefois, la composante systématique de l'erreur d'échantillonnage est d'ordinaire très petite comparativement à sa composante aléatoire. Dans le cas des autres erreurs non dues à l'échantillonnage, tant la composante aléatoire que la composante systématique peuvent être importantes.

Erreurs de couverture

Les erreurs de couverture ont une incidence directe sur la précision des chiffres du recensement, c'est-à-dire sur la taille des divers univers du recensement : la population, les familles, les ménages et les logements. Bien que des mesures aient été prises pour corriger certaines erreurs identifiables, les chiffres définitifs sont toujours entachés d'une certaine erreur découlant du fait que des personnes ou des logements ont été oubliés, englobés à tort dans le recensement ou comptés deux fois.

L'oubli de logements ou de personnes se traduit par un sous-dénombrement. Des logements peuvent être oubliés en raison d'une mauvaise interprétation des limites du secteur de dénombrement (SD), ou du fait qu'ils sont cachés ou semblent inhabitables. Des personnes peuvent être oubliées parce que leur logement est oublié ou classé comme inoccupé ou quand certains membres du ménage sont omis sur le questionnaire parce que le répondant a mal interprété les instructions concernant les personnes à inclure. Enfin, certaines personnes peuvent être oubliées parce qu'elles n'ont pas de domicile habituel et qu'elles n'ont pas passé la nuit du recensement dans un logement.

Le dénombrement à tort ou le double compte de logements ou de personnes se traduit par un surdénombrement. Il peut y surdénombrement des logements lorsque des constructions impropres à l'habitation sont classées comme logements ou lorsque des unités d'habitation ne répondant pas à la définition du logement retenue pour les fins du recensement sont comptées séparément plutôt que d'être considérées comme faisant partie d'un logement plus grand. Il peut y avoir double compte des logements lorsqu'il existe, par exemple, une certaine ambiguïté au sujet des limites des SD. Les personnes peuvent être comptées deux fois parce que leur logement a été compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. À l'occasion, il arrive qu'une personne ne faisant pas partie de l'univers du recensement, comme un résident étranger ou une personne fictive, soit dénombrée à tort. En moyenne, le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements

W.

e e

et des personnes sont donc probablement légèrement sous-estimés.

En 1991, quatre études ont été entreprises afin d'évaluer les différents aspects de l'erreur de couverture. Premièrement, on a visité de nouveau un échantillon de logements classés comme inoccupés afin de vérifier s'ils étaient réellement inoccupés le jour du recensement. Les chiffres définitifs du recensement ont ensuite été corrigés pour tenir compte des personnes ou des ménages oubliés parce que leur logement a été classé par erreur comme inoccupé. Deuxièmement, on a prélevé un échantillon de personnes dénombrées comme résidents temporaires afin de vérifier si elles avaient ou non été dénombrées à leur domicile habituel. À partir de cet échantillon, on a établi des estimations du nombre de personnes oubliées parce qu'elles étaient temporairement absentes de leur domicile habituel, puis on a rectifié les chiffres définitifs de population en conséquence. Malgré ces rectifications, les chiffres définitifs sont encore sujets à un certain sous-dénombrement. Une troisième étude, connue sous le nom de contre-vérification des dossiers, est réalisée pour déterminer l'importance de ce sous-dénombrement résiduel, pour le Canada dans son ensemble ainsi que pour chaque province et territoire, à l'occasion du recensement de 1991. Le sous-dénombrement tend à être plus élevé pour certains segments de la population comme les jeunes adultes de sexe masculin et les personnes récemment immigrées. quatrième étude, connue sous le nom d'étude surdénombrement, a pour objet d'étudier les erreurs de surdénombrement. Ensemble, les résultats de la contre-vérification des dossiers et de l'étude du surdénombrement fournissent une estimation du sous-dénombrement net.

Autres erreurs non dues à l'échantillonnage

Alors que les erreurs de couverture ont une incidence sur le nombre d'unités comprises dans les divers univers du recensement, les autres erreurs influent sur les chiffres relatifs aux caractéristiques de ces unités.

Il est parfois impossible d'obtenir une réponse complète d'un ménage, même si le logement a été classé comme étant occupé et un questionnaire a été livré. Il se peut que les membres du ménage aient été absents pendant toute la période du recensement ou, en de rares occasions, que le membre responsable du ménage ait refusé de remplir le questionnaire. Il arrive plus souvent que le questionnaire soit retourné, mais qu'il y manque des données à certaines questions ou pour certaines personnes. Des efforts considérables sont déployés afin d'obtenir une réponse la plus complète possible. Les recenseurs contrôlent les questionnaires et assurent un suivi à l'égard de l'information manquante. Le travail du recenseur est ensuite vérifié tant par un surveillant que par un technicien du contrôle qualitatif. Malgré tout, il existe toujours un petit nombre de réponses manquantes à la fin de l'étape de la collecte. Bien que les entrées manquantes soient éliminées en cours de traitement en remplaçant chaque valeur manquante par la valeur correspondante figurant dans un enregistrement «similaire», il est possible que certaines erreurs de non-réponse s'y glissent. Cela est particulièrement grave lorsque les personnes non répondantes diffèrent des répondants sous certains aspects; en effet, cette procédure se traduira par l'introduction d'un biais de non-réponse.

Même lorsqu'une réponse est obtenue, il se peut qu'elle ne soit pas tout à fait exacte. Il est possible que le répondant ait mal interprété la question ou ait donné une réponse au jugé, surtout lorsqu'il répondait pour le compte d'un autre membre du ménage, qui était peut-être absent. Ces erreurs sont désignées sous le nom d'erreurs de réponse. Bien que ces erreurs surviennent d'ordinaire du fait que les répondants aient fourni des renseignements inexacts, elles peuvent aussi résulter d'erreurs commises par les recenseurs en remplissant certaines parties du questionnaire, comme le type de construction résidentielle, ou au moment du rappel effectué pour obtenir une réponse manquante.

Certaines questions du questionnaire du recensement nécessitent une réponse en lettres. Pendant le traitement, on attribue un code numérique à ces réponses. Il est possible que des erreurs de codage surviennent, surtout lorsque la liste de codes est longue (comme dans le cas de la langue, de l'origine ethnique, de l'industrie et de la profession) et que la réponse écrite est ambiguë, incomplète ou difficile à lire. On limite le nombre d'erreurs de codage, sans toutefois l'éliminer complètement, en vérifiant un échantillon des codes et en prenant des mesures correctives au besoin. Pour la première fois en 1991, une grande partie des tâches de codage ont été automatisées afin, entre autres, de réduire le nombre d'erreurs de codage.

Les renseignements figurant dans les questionnaires sont introduits sur clavier dans un fichier informatique. Deux méthodes de résolution ordonnée sont utilisées pour limiter le nombre d'erreurs à la saisie des données. Dans un premier temps, certains contrôles (comme des vérifications d'étendue) sont effectués à mesure que les données sont entrées. Dans un second temps, on introduit de nouveau sur clavier un échantillon tiré de chaque lot de documents, puis on compare les entrées résultantes aux entrées initiales. Si le nombre d'erreurs relevées au sein des entrées initiales dépasse un seuil prédéterminé, on reprend l'introduction sur clavier des données de tout le lot de documents.

Une fois les données saisies, elles sont envoyées à Ottawa où elles sont soumises à une série de contrôles informatiques visant à relever les réponses manquantes ou incohérentes. Dans le cas des réponses incohérentes, il faut d'abord définir ce que l'on entend par une réponse invalide. Les réponses invalides ou manquantes doivent ensuite être remplacées par des réponses valides, c'est-à-dire par des réponses qui sont compatibles avec les autres données figurant dans l'enregistrement. Dans un petit nombre de cas, il est possible de déduire la réponse correcte à partir des autres données de l'enregistrement. Toutefois, dans la majorité des cas, cela est impossible et on obtient une réponse valide à partir d'un enregistrement «donneur» prélevé au hasard parmi un groupe d'enregistrements cohérents qui sont pour un certain nombre de similaires caractéristiques connexes à celles l'enregistrement invalide. Bien sûr, rien ne garantit que la valeur imputée sera nécessairement identique à la réponse correcte pour la personne concernée. Cependant, pour autant que les enregistrements manquants ou invalides soient, en moyenne, similaires aux enregistrements valides, les erreurs à l'imputation s'annuleront plus ou moins une fois que les résultats auront été totalisés pour une région géographique ou un sous-groupe de population de taille suffisante.

Diverses études sont réalisées afin d'évaluer la qualité des réponses obtenues dans le cadre du recensement de 1991. Ainsi, on a calculé les taux de réponse et les taux de rejet au contrôle pour chaque question. Ces taux peuvent permettre de déterminer le potentiel de non-réponse et d'autres erreurs. De même, les totalisations établies à partir des données du recensement de 1991 ont été ou seront comparées avec les estimations correspondantes obtenues à partir des données des recensements précédents, des enquêtes-échantillon (comme l'Enquête sur la population active) et de divers dossiers administratifs (comme les registres des naissances et le cadastre municipal). Ces comparaisons peuvent permettre de cerner les problèmes de qualité éventuels ou, à tout le moins, de relever les divergences entre les sources.

Outre ces comparaisons entre données agrégées, certaines études de couplage de microdonnées sont actuellement menées afin de comparer les réponses de certains particuliers obtenues au recensement à celles d'une autre source de renseignements. Pour un certain nombre de caractéristiques «stables» (comme l'âge, le sexe, la langue maternelle, le lieu de naissance), on compare les réponses obtenues auprès d'un échantillon de personnes à l'occasion du recensement de 1991 aux réponses obtenues des mêmes personnes à l'occasion du recensement de 1986. De même, à la suite du recensement de 1991, un échantillon de personnes ont été dénombrées de nouveau surtout pour déterminer les taux de surdénombrement. En même temps, cela a permis aux intervieweurs de poser une série de questions détaillées sur la langue, l'origine ethnique et l'état matrimonial; les réponses données à ces questions seront comparées aux réponses correspondantes du recensement afin de reconnaître les erreurs de réponse et tenter de les comprendre.

Erreurs d'échantillonnage

Les estimations obtenues en pondérant les réponses recueillies auprès d'un échantillon sont susceptibles d'être entachées d'erreurs en raison de la répartition des caractéristiques au sein de l'échantillon qui n'est généralement pas identique à la répartition correspondante au sein de la population dans laquelle l'échantillon a été prélevé.

L'erreur susceptible d'être introduite par l'échantillonnage variera en fonction de la rareté relative de la caractéristique étudiée au sein de la population. Lorsque la valeur contenue dans la case est élevée, cette erreur sera relativement faible proportionnellement à cette valeur. Lorsque la valeur contenue dans la case est faible, cette erreur sera relativement importante proportionnellement à cette valeur.

L'erreur susceptible d'être introduite par l'échantillonnage est d'ordinaire exprimée sous forme d'«erreur type». Il s'agit de la racine carrée de la moyenne, calculée pour l'ensemble des échantillons de même taille prélevés selon le même plan d'échantillonnage, des carrés de l'écart de l'estimation obtenue à partir de l'échantillon par rapport à la valeur pour l'ensemble de la population.

Le tableau suivant fournit des mesures approximatives de l'erreur type due à l'échantillonnage. Ces mesures sont données uniquement à titre indicatif.

Tableau : Erreur type approximative introduite par l'échantillonnage pour les données-échantillon du recensement de 1991

Valeur contenue dans la case	Erreur type approximative
50 ou moins	15
100	20
200	30
500	45
1,000	65
2,000	90
5,000	140
10,000	200
20,000	280
50,000	450
100,000	630
500,000	1400

Les utilisateurs souhaitant déterminer l'erreur d'échantillonnage approximative pour une case de données dont la valeur a été obtenue à partir de l'échantillon de 20 % doivent choisir l'erreur type correspondant à l'entrée dans la colonne «Valeur contenue dans la case» ci-dessus qui se rapproche le plus de celle qui figure dans la case de données de la totalisation en cause. En utilisant la valeur ainsi obtenue pour l'erreur type, l'utilisateur peut, en général et à juste titre, être certain que la valeur réelle pour la population dénombrée (ne tenant pas compte des formes d'erreur autres que l'erreur d'échantillonnage) ne s'écarte pas de la valeur contenue dans la case dans une proportion supérieure ou inférieure à trois fois l'erreur type (p. ex., si la valeur contenue dans la case est 1,000, la fourchette à l'intérieur de laquelle se situe la valeur réelle serait de 1,000 \pm 3 \times 65 ou de 1,000 \pm 195).

Les erreurs types données dans le tableau ci-dessus ne s'appliquent pas aux totaux ou aux totaux partiels relatifs à la population ou aux univers (personnes, ménages, logements ou familles) pour la région géographique étudiée (voir Échantillonnage et pondération). On peut déterminer l'effet de l'échantillonnage pour ces valeurs en les comparant à celles des publications correspondantes contenant des données intégrales.

Il est à noter que l'effet du plan d'échantillonnage et de la méthode de pondération utilisés dans le cadre du recensement de 1991 variera d'une caractéristique à l'autre et d'une région géographique à l'autre. Il est donc possible que les valeurs de l'erreur type données dans le tableau ci-dessus sous-estiment ou surestiment l'erreur attribuable à l'échantillonnage.

Confidentialité et arrondissement aléatoire

Afin de protéger le caractère confidentiel des renseignements fournis, les chiffres indiqués aux tableaux ont fait l'objet d'un arrondissement aléatoire qui supprime toute possibilité d'associer des données statistiques à une personne facilement reconnaissable. Selon cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) jusqu'à un multiple de 5 et dans certains cas, de 10. Cette technique assure une protection efficace contre la divulgation sans ajouter d'erreur significative dans les données du recensement. Cependant, elle entraîne certaines conséquences pour les utilisateurs. Comme les totaux sont arrondis séparément, ils ne correspondent pas nécessairement à la somme des chiffres arrondis séparément dans les répartitions. De plus, il faut s'attendre à ce que les totaux et les autres chiffres correspondants dans diverses totalisations du recensement présentent quelques légères différences. De même, la somme des pourcentages, qui sont calculés à partir de chiffres arrondis, ne correspond pas forcément à 100. Les répartitions en pourcentage et les taux sont dans la plupart des cas basés sur des données arrondies, alors que les variations en pourcentage et les moyennes sont basées sur des données non La distorsion importante pouvant résulter de l'arrondissement aléatoire dans le cas des cases de faible valeur mérite aussi d'être signalée. Cette distorsion peut entraîner une perte de précision pour les cases de données renfermant des chiffres peu élevés.

Les utilisateurs devraient, lors de l'agrégation des données arrondies, être conscients de cette distorsion. Les erreurs dues à l'arrondissement ont tendance à s'annuler lorsque les chiffres contenus dans les cases sont agrégés de nouveau. Cependant, il est possible de réduire les distorsions en intégrant dans la mesure du possible les totaux partiels appropriés dans les totalisations.

Les utilisateurs désirant obtenir un maximum de précision peuvent aussi choisir de demander des totalisations personnalisées. Dans le cas de produits personnalisés, l'agrégation se fait à partir des enregistrements dans la base de données du recensement se rapportant aux particuliers. L'arrondissement aléatoire a lieu uniquement après que les cases de données ont été agrégées, ce qui réduit la distorsion au minimum.

Outre l'arrondissement aléatoire, on a adopté d'autres techniques, comme la **suppression des régions**, afin d'assurer encore mieux la confidentialité des réponses des particuliers.

Dans le cadre de la **suppression des régions**, toutes les données caractéristiques se rapportant aux régions géographiques dont la population est inférieure à une taille donnée sont supprimées. L'importance de la suppression est fonction des facteurs suivants :

- si les données sont totalisées à partir d'une base de données intégrales, la suppression est fondée sur la population totale;
- si les données sont totalisées à partir d'une base de données-échantillon, la suppression est fondée sur la population excluant les pensionnaires d'établissements institutionnels;

- si les données renferment une répartition du revenu, on supprime les données relatives aux régions dont la population est inférieure à 250 personnes;
- si les données ne renferment aucune répartition du revenu, on supprime les données relatives aux régions dont la population est inférieure à 40 personnes.

Dans tous les cas, les données supprimées sont incluses dans les totaux ou totaux partiels du niveau d'agrégation supérieur approprié.

Cette technique est appliquée à tous les produits renfermant des données infraprovinciales (c.-à-d. la série des Profils, les tableaux sommaires de base, les produits personnalisés et semi-personnalisés), qu'il s'agisse de données intégrales ou de données-échantillon.

Échantillonnage et pondération

Les données du recensement de 1991 sont soit des données intégrales (c.-à-d. recueillies auprès de l'ensemble des ménages), soit des données-échantillon (c.-à-d. recueillies auprès d'un échantillon aléatoire de ménages) que l'on a pondérées pour obtenir des estimations pour l'ensemble de la population. Les données du présent rapport ont été recueillies auprès d'un échantillon de 20 % et pondérées pour compenser pour l'échantillonnage. Tous les en-têtes de tableaux sont annotés en conséquence. On notera que, dans les réserves indiennes et les régions éloignées, toutes les données ont été recueillies auprès de l'ensemble de la population.

Il est possible que, pour une région géographique donnée, le total ou le total partiel pondéré de la population, des ménages, des logements ou des familles diffère du chiffre correspondant figurant dans les publications contenant des données intégrales. Ces variations (en plus de l'effet de l'arrondissement aléatoire) sont attribuables à l'échantillonnage.

Notes spéciales

Chiffres de population basés sur la résidence habituelle

Les chiffres de population présentés ici pour les différentes régions géographiques indiquent le nombre de Canadiens qui y ont leur lieu habituel de résidence, sans égard au lieu où ils se trouvaient le jour du recensement. Sont également comptés les Canadiens séjournant dans un logement de la région en cause le jour du recensement et n'ayant pas de lieu habituel de résidence ailleurs au Canada, de même que ceux qui sont considérés comme des «résidents non permanents» (voir le nota au sujet de ce groupe). Dans la plupart des régions, il n'y a guère de différence entre le nombre de résidents habituels et le nombre de personnes séjournant dans la région le jour du recensement. Toutefois, dans certains endroits, comme les lieux de villégiature et les régions où sont situés des camps de chantier importants, la différence entre ces deux chiffres peut être importante.

Réserves indiennes et établissements indiens partiellement dénombrés

Lors du recensement de 1991, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a été interrompu avant d'être mené à terme. De plus, certaines réserves indiennes et établissements indiens ont été dénombrés tardivement ou la qualité des données recueillies a été jugée insuffisante. Ces régions géographiques (un total de 78) sont appelées réserves indiennes et établissements indiens partiellement dénombrés.

Les données de 1991 ne sont pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les totalisations. Les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font donc l'objet d'un nota approprié. En raison des données manquantes, les utilisateurs doivent prendre note que les comparaisons (p. ex., des variations en pourcentage) entre 1986 et 1991 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces, régions métropolitaines de recensement et agglomérations de recensement) mais peut être plus important pour les petites régions où les réserves et établissements indiens en cause représentent une proportion plus grande de la population.

Une liste des réserves indiennes et établissements indiens partiellement dénombrés en cause ainsi que les chiffres de la population et des logements privés occupés des deux derniers recensements (si les données sont disponibles) a été dressée et est présentée à l'annexe 1.

Résidents non permanents

Pour la première fois en 1991, le recensement de la population inclut à la fois les résidents permanents et les résidents non permanents. Les résidents non permanents comprennent les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié.

Lors des recensements antérieurs, seuls les résidents permanents du Canada étaient inclus dans le recensement (exception faite pour 1941). Les résidents non permanents étaient considérés comme des résidents étrangers et n'étaient pas dénombrés.

Présentement au Canada, les résidents non permanents forment un segment croissant de la population. Leur présence peut avoir une influence sur la demande de services gouvernementaux tels que les soins de santé, l'éducation et les programmes d'emploi. L'inclusion des résidents non permanents au recensement de 1991 facilitera aussi la comparaison avec les statistiques provinciales et territoriales (mariages, divorces, naissances et décès) qui incluent cette population. En outre, la définition du recensement permet maintenant de mieux refléter la recommandation des Nations Unies, à savoir que les résidents à long terme (personnes demeurant dans un pays pour un an ou plus) soient dénombrés.

Le total des chiffres de population, de même que ceux de toutes les variables du questionnaire, seront touchés par ce

changement à l'univers du recensement de 1991. D'après les résultats du recensement de 1991, il y avait 223 410 résidents non permanents au Canada, ce qui représente un peu moins de 1 % de la population totale. Les utilisateurs doivent faire preuve d'une très grande prudence lorsqu'ils comparent des données de 1991 avec celles de recensements antérieurs pour des régions géographiques où la concentration de résidents non permanents est importante. Celles-ci comprennent les principales régions métropolitaines de l'Ontario, de la Colombie-Britannique et du Québec. La répartition de la population des résidents non permanents pour les provinces, les territoires et les régions métropolitaines de recensement est présentée à l'annexe 2.

78

. in

73.5

Même si tous les efforts possibles ont été déployés pour dénombrer les résidents non permanents, le dénombrement de cette population n'est pas aussi complet que celui des résidents permanents. Des facteurs tels que les problèmes linguistiques et la réticence à remplir un formulaire du gouvernement ou de comprendre l'utilité de leur participation peuvent avoir influé sur le dénombrement des résidents non permanents et s'être traduits par un sous-dénombrement.

Activité

Les concepts de l'activité au recensement n'ont pas changé entre 1986 et 1991. Par contre, le traitement des données a été modifié, ce qui a entraîné quelques différences. Au recensement de 1991, une question sur la fréquentation scolaire était posée. Cette question n'a pas été posée au recensement de 1986. Elle était utilisée pour le contrôle de la variable de l'activité, plus spécifiquement le chômage. Par conséquent, ces différences de traitement affectent la population en chômage et sont en grande partie concentrées dans le groupe d'âge des 15 à 19 ans. Le tableau ci-dessous indique l'ampleur de cet effet sur les données, au niveau du Canada.

Activité, recensement du Canada de 1991

Canada	Recensement de 1991 (chiffres publiés en 1991)	Recensement de 1991 (selon le dépouillement de 1986)
Population active de 15 ans et plus Personnes occupées Chômeur(euse)s Inactifs	14,474,940 13,005,505 1,469,440 6,829,795	14,535,850 13,005,500 1,530,350 6,768,885
Population active de 15-19 ans Personnes occupées Chômeur(euse)s Inactifs	904,370 766,260 138,110 967,865	948,260 766,260 182,005 923,965
Population active de 20 ans et plus Personnes occupées Chômeur(euse)s Inactifs	13,570,575 12,239,240 1,331,330 5,861,940	13,587,590 12,239,245 1,348,350 5,844,925

Nombre de semaines travaillées

Les données concernant le nombre de semaines travaillées en 1990 doivent être utilisées avec circonspection pour les catégories 40 à 48 semaines et 49 à 52 semaines, car certains répondants ont tendance à exclure leurs congés payés de vacances ou pour autres raisons de leurs semaines de travail, alors que ces congés devraient être inclus. Ainsi, la catégorie 49 à 52 semaines peut être sous-estimée.

Annexe 3. Population et composantes de l'activité, recensement du Canada de 1991

Autres produits connexes

La gamme de produits du recensement de 1991 est conçue pour satisfaire les divers besoins de nos utilisateurs. Nous offrons une grande diversité de produits et services du recensement de la population de 1991. Ils sont divisés en cinq catégories.

- (1) Les produits de référence sont conçus pour faciliter l'utilisation des produits et des services; ils aident les utilisateurs à reconnaître leurs besoins, à trouver et à interpréter les données.
- (2) Les **produits de données** offrent un vaste éventail de données du recensement pour les régions géographiques normalisées sur les caractéristiques sociales, culturelles et économiques des Canadiens.
- (3) Les produits analytiques sont des publications qui expliquent les données du recensement de 1991 sur un grand nombre de thèmes ou de sujets, dont les résultats sont présentés dans un style facile à comprendre.
- (4) Le service des totalisations établit des totalisations pour les utilisateurs qui veulent des données sous une forme plus détaillée ou plus précise que ce que l'on trouve dans les publications normalisées.
- (5) On offre des **ateliers et des séminaires** aux nouveaux utilisateurs et aux utilisateurs actuels pour les informer sur les données du recensement et pour les aider à en tirer le maximum en fonction de leurs besoins.

Pour de plus amples renseignements sur les produits et services du recensement offerts, consultez le **Catalogue du recensement de 1991**, n° 92-302F au catalogue. Vous pouvez également contacter le centre régional de consultation le plus près indiqué à la section «Pour renseignements» de la présente publication.

Vous trouverez ci-après une liste d'autres produits ayant une présentation et un contenu semblables à cette publication.

Centres régionaux de consultation

Les centres régionaux de consultation de Statistique Canada offrent une gamme complète des produits et services du recensement. On y trouve une bibliothèque et un comptoir de vente où les utilisateurs peuvent consulter ou acheter les différents produits, dont les publications, les disquettes de micro-ordinateurs, les microfiches et les cartes.

Le personnel des centres régionaux de consultation fournit des services de consultation et de recherche en plus du service après-vente, y compris des séminaires et des ateliers sur l'utilisation des données de Statistique Canada.

Chaque centre vous offre la possibilité d'extraire de l'information des systèmes d'extraction des données informatisés CANSIM et E-STAT de Statistique Canada. Un service de renseignements téléphonique est également disponible; ce service est gratuit pour les utilisateurs se trouvant à l'extérieur des secteurs d'appels locaux. Téléphonez, écrivez, télécopiez ou visitez le centre régional de consultation le plus près pour de plus amples renseignements.

Autres références et services

Vous pouvez vous procurer les publications de Statistique Canada dans les centres régionaux de consultation et dans les bibliothèques de dépôt, ou vous pouvez également les commander par l'entremise de votre librairie ou de votre agent d'abonnement. Pour obtenir une liste des points de vente au Canada, communiquez avec le centre régional de consultation le plus près, ou consultez le Catalogue du recensement de 1991 (nº 92-302F au catalogue).

Les distributeurs secondaires présentent à leurs clients des possibilités d'accès aux données et un soutien aux analyses grâce à une diversité de services de consultation et de services informatisés que n'offre pas Statistique Canada. Vous pouvez obtenir les noms et adresses des distributeurs autorisés dans un centre régional de consultation.

Statistique Canada offre des produits géographiques numériques qui permettent la manipulation informatique des données géographiques. Un service d'extraction des données personnalisé permet aux utilisateurs de délimiter eux-mêmes, s'ils le désirent, la région géographique qu'ils veulent étudier. La gamme de fichiers d'extraction des données et de services offre une grande flexibilité dans la sélection d'une base géographique.

Vous trouverez dans le Catalogue du recensement de 1991 (nº 92-302F au catalogue), la description complète des fichiers numériques et des services.

On peut obtenir des renseignements sur les produits et services du recensement de l'agriculture en consultant la publication Produits et services du recensement de l'agriculture de 1991, n° 92-303 au catalogue, ou en téléphonant sans frais au 1-800-465-1991.

Les utilisateurs qui ont besoin de données spéciales peuvent demander les services des enquêtes postcensitaires. Les données sont présentées sur disquettes pour micro-ordinateur pouvant être utilisées avec un programme de calcul de tableaux financiers ou sur support papier. Pour de plus amples renseignements, communiquez avec le centre régional de consultation le plus près.

La Division de la diffusion informatique des données (DDID) est responsable du CANSIM qui consiste en un réseau de bases de données informatisées et un service d'extraction des données de Statistique Canada. Les utilisateurs ont accès aux statistiques actuelles et historiques de diverses façons, notamment grâce aux progiciels spécialisés de manipulation et d'analyse des données, aux ressources graphiques et au service de recherche bibliographique. Pour de plus amples renseignements sur le CANSIM, communiquez avec un centre régional de consultation.

Notes, Footnotes and Abbreviations

Note(s)

Comparison of the 1991 Census data with data from earlier censuses is affected by a change in the definition of the 1991 Census population. Persons in Canada on student authorizations, employment authorizations, Minister's permits, and as refugee claimants were enumerated in the 1991 Census but not in previous censuses. These persons are referred to as non-permanent residents. For further information, see the "Special Notes" section.

- Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.
- † Excludes Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the "Special Notes" section.
- ¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the "Special Notes" section.

Footnote(s)

- (1) Includes persons in common-law unions.
- (2) Includes persons who did not work in 1990 as well as persons who worked in 1990.
- (3) Refer to the note above on comparison of the 1991 Census data with data from earlier censuses.

Abbreviation(s)

T. = Total

M. = Males

F. = Females

Nota, Renvois et Abréviations

Nota

La comparaison des données du recensement de 1991 avec celles des recensements précédents est affectée par la modification apportée à la définition de la population du recensement de 1991. Les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié ont été dénombrés au recensement de 1991, mais ne l'ont pas été aux recensements antérieurs. Ces personnes sont des résidents non permanents. Pour plus de renseignements, voir la section «Notes spéciales».

- .. Nombres non disponibles.
- ... N'ayant pas lieu de figurer.
- Néant ou zéro.
- Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir la section «Notes spéciales».
- ¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir la section «Notes spéciales».

Renvoi(s)

- (1) Comprend les personnes vivant en union libre.
- (2) Comprend les personnes n'ayant pas travaillé en 1990 ainsi que les personnes ayant travaillé en 1990.
- (3) Reportez-vous à la note ci-dessus portant sur la comparaison des données du recensement de 1991 avec celles des recensements antérieurs.

Abréviation(s)

T. = Total

M. = Sexe masculin

F. = Sexe féminin

Statistique Canada

The Census is the most comprehensive data base available in Canada today... are you sure you're getting everything out of it?

Statistics Canada has designed a series of 1991 General Reference Products to put the Census to work for you.

To order the Census Dictionary, Census Handbook, Census General Review or a Census Catalogue of products and services, call your nearest Statistics Canada Regional Reference Centre or our national order line... De nos jours, le recensement constitue la base de données la plus complète qui soit au Canada...

Voulez-vous en tirer tous les avantages?

Statistique Canada a conçu une série de produits de référence afin de faire travailler le recensement pour vous.

On peut se procurer le Dictionnaire du recensement, le Recensement en bref, la Revue générale du recensement et le Catalogue des produits et services auprès des centres régionaux de consultation de Statistique Canada ou en téléphonant au...

Labour Force Data

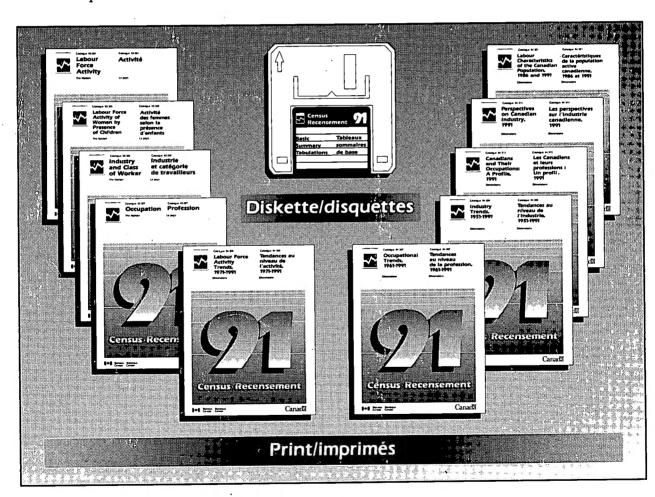

At Your Finger Tips

Data from the 1991 Census of Population on labour force participation, occupation and industry are now available to augment our other comprehensive databases.

Des données sur la population active

À portée de la main

Les données recueillies lors du Recensement de la population de 1991 sur l'activité, la profession et l'industrie sont maintenant prêtes à s'ajouter à nos autres bases de données détaillées.

For a complete list of available products, call your nearest Statistics Canada Regional Reference Centre or call our national order line...
